

1000 WLU Matrix. 2021

Methodologies of the different world rankings use own indicators for university assessment. Using the results of various world university rankings allows to create a more general aggregated representation system of the world's leading universities in the form a matrix. Matrix elements represent the number of universities of a certain rank in the country. The rank of a university is determined as the average value of its position in international rankings over the past two years and it is presented in the matrix in the TOP of the corresponding order (from 50 to 1000).
